Connecting to the detnsw wireless network
Microsoft Windows 7

This guide only applies to devices not configured for ET4L or NSR Remote Services. Access to the internet is filtered. A DEC username and password is required to connect to the detnsw wireless network.

1. Locate the Wireless Connection status icon in the taskbar and select Open Network and Sharing Center.

2. Select Manage Wireless Networks.

3. Select Add.

4. Select manually create a network profile.

5. Enter the following information.
   Network name: detnsw
   Security type: WPA2 Enterprise
   Encryption type: AES

   Leave all other settings as default and click next.

6. Click Change connection settings.

7. Click the Security tab and select the Settings button.
